Questions to Richard Dawkins, 5/9 2012

The Magic of Reality: How We Know What's Really True.

1. Is it possible that the Big Bang was caused by some kind of Pure Energy free from mass-space-time? And that this Pure Energy exists within the principles of modern quantum physics 11 dimensions? Is Stephen Hawkins Imaginary Time amongst them?
2. Because our mass has been caused by background radiation waves and these background radiation waves consist of fluctuations similar to a computer hard drive - this can be detected by spectrometer if enlarged 100,000 times. Is it possible that these fluctuation waves have instructions of an organizational complex building factor? Which result in our constructive consciousness which, in turn, is bound to all complex materials? Like a New Dimension.
3. In that case, is it possible that pure energy consist of some kind of complex building consciousness?
4. Is it possible that dark-, vacuum- and pure energy and Higgs fields are one and the same?
5. If this pure energy can transfer to mass-space-time according to Einstein's formula $E=mc^2$, is it then possible to detect the acceleration of our expanding galaxy ? Because "c²" stand for 300,000² km²/sec² and sec² stands for an accelerating factor (a=km/sec²).
6. If any of these five question is NO, can you then explain why today's science does not take in to account where the fundamental laws of physics come from? How can things be self constructed without early fundamental instructions? How can you ignore our consciousness which is an obvious factor in our physical world? Is your consciousness self constructed?
7. Can we combine the Darwin Theory with the findings showing that RNA and DNA actively work together to adapt and renew the genome for a new generation.
